

PRODUCT INFORMATION DATA SHEET

EVA AID - II

- DESCRIPTION** : EVA AID - II is a unique processing aid specially developed to improve the processing behavior and properties of EVA compounds.
- SPECIFICATIONS** : Appearance : Creamish Powder
Melting Point : 104 - 107°C
- ADVANTAGES IN EVA COMPOUNDS** :
 - Ensure uniform dispersion of pigments / fillers / additives in the compound.
 - Even with higher filler loading does not allow size variation.
 - EVA AID - II gives strength and durability to the compound.
 - Even at higher temperature, give better mould release and better surface finish to final product.
- APPLICATIONS** : EVA Footwear / Sheet Compounds.
- USE LEVELS** : 1.0 - 1.5 phr is a general recommended dosage, however optimum level depends on polymer / filler ratio and desired performance.
